Join the Equity Crowdfunding Campaign for the Dawn of the Solar Age

Geostellar is a patented platform that instantly and interactively tailors a solar plan to best meet the unique energy needs of each individual home or business. Solar Club members are our brand champions, leveraging the capabilities of our platform to promote solar in their communities. We plan to issue a solar-powered cryptocurrency, Zydeco*, through an anticipated Initial Coin Offering ("ICO"). Each Zydeco blockchain token is expected to represent one Watt of solar power capacity.

Highlights

Over **\$3.5MILLION** 2016 Revenue

2014-2016 **146%** Average Yearly Growth

Over **\$1.3MILLION** DOE Sunshot Awards

- Patented "Big Data Geomatics" Platform Protected in US, EU & China
- Selected by 3M, Cisco, J&J, Intuit, Bosch and other Fortune 500 Companies as Exclusive Solar Employee Benefits Program Provider
- Over \$1.3M in DOE SunShot Awards, including current Solar In Your Community Challenge for low- and middle-income shared solar in Washington, DC
- 146% year over year revenue growth 2014 through 2016,
- Investors include Matador Capital, Select Venture Partners, Panacea Capital, Valentis Capital and angel investors from across the country

We've been featured in...

Fossil fuels are costly and harm the planet

Climate change, caused by greenhouse gas emissions, is a threat to the whole planet.

The burning of coal, oil and natural gas for energy is a major contributor to climate change. Pollution from fossil fuels also contributes to lung diseases such as childhood asthma and poisons the water with mercury that makes its way into our food supply.

Grid electricity is not just dirty, it's also expensive. Electricity bills go up an average of 4.8% every year, meaning utility rates on average are almost 50% higher across the US than they were a decade ago!

Fossil fuels remain our primary energy source due to inertia. Most energy users aren't aware of the benefits of solar energy, and don't know how to switch to clean, affordable solar power. Geostellar is changing that!

The Solar Age is here

Solar energy is cleaner and cheaper than grid power, and we are making it accessible and affordable for everyone.

Our patented solar energy platform instantly and interactively tailors a solar energy plan to best meet the unique needs of each home or business.

On our platform, individuals and organizations can start a Solar Club in their community to earn money, offer discounts and protect the planet by promoting solar energy.

Solar Clubs are springing up around the country, led by solar promoters who organize community solar initiatives.

Geostellar helps solar promoters start or join a Solar Club and manage every detail with our online platform and our team of Solar Guides, designers and project managers. We'll provide the solar energy equipment, installation and financing, as well as marketing, training and support required to make every participant successful.

The powerful combination of our online platform and network of local Solar Club promoters is overcoming the fossil fuel inertia and accelerating the advent of the Solar Age.

What is a Solar Club?

to generate a new income stream, reduce energy costs and fight climate change by promoting solar energy in communities across the country.

Solar Clubs help entrepreneurs and businesses do well by doing good. Solar Club promoters share a love for their planet, a passion for service and an infectious enthusiasm. With the help of Geostellar's solar marketplace, Solar Club promoters make a profit by encouraging local households and business to switch to clean, affordable solar energy.

Solar promoters form Solar Clubs with local organizations like schools, churches, town councils, clubs, charities and hospitals to coordinate and organize groups that go solar together. Group solar programs reduce the cost of solar installation and increase savings on energy bills for every participant.

Solar promoters and partnering organizations establishes Solar Clubs on Geostellar to manage their revenue-generating solar initiative.

Individuals and organizations earn money promoting clean energy.

Every community has realtors to help folks buy and sell homes, insurance agents to provide coverage, and bankers to finance major purchases and improvements.

There is a similar role in each community for a solar promoter to help friends, neighbors and associates switch to clean, affordable solar energy .

When a promoter starts or joins a Solar Club, they earn compensation by helping homes and businesses switch to solar energy.

Promoters can also build a team or enroll whole organizations in a Solar Club and share in the total revenue!

We provide everything a promoter needs to get started

Geostellar brings together high quality equipment, qualified local contractors and favorable financing terms on our solar platform, so a Solar Club can begin promoting solar energy and generating revenue from day one.

- **Equipment.** We tailor each solar energy system to best meet the unique needs of every household and workplace.
- **Installation.** Our local installation contractors have impeccable credentials, stellar

Invest in Geostellar — Republic

10/6/17, 1:45 PM

references, accreditation, licensing and insurance.

- **Financing.** We provide a range of financing options to give you relief from high energy costs without any money out of your pocket.

Geostellar's solar platform assesses each site's solar potential, manages Solar Club members and much more.

Our patented solar energy platform

The magic happens on Geostellar, our patented solar energy platform. Our advanced "big data geomatics," protected by patents issued in the US, Europe and China, simplify the process of going solar.

Our web, mobile and tablet apps draw on sophisticated simulations of each individual rooftop and ground site. We collect laser imaging from state, local and federal government sources that fly aircraft mounted with LiDAR (Light Detection and Ranging) sensors, which precisely measure the heights of each structure and tree by timing the returns of laser beams. The data is delivered as dense point-clouds, which often provide sub-millimeter resolution.

Instant, interactive solar assessment

Invest in Geostellar — Republic

10/6/17, 1:45 PM

With the LiDAR data, we can generate a virtual world and move the sun through the sky to determine the precise amount of sunlight that shines on each square meter of rooftop and the amount of energy that would be generated over the course of the year if solar panels were placed in that spot, based on the slope, orientation and shading.

We add data on energy usage patterns, utility rates, installation costs and federal, state and local incentives to provide a complete model of the energy, environmental and economic aspects of solar energy unique to each individual property.

The result is an instant, interactive assessment of the solar benefits that is easy to understand, with summaries, cash-flow models and a recommended system configuration.

Here is an example high-level summary for a home in White Plains, NY:

MONTHLY HOUSEHOLD ENERGY NEEDS

1964 kWh

electricity your home requires

1917 kWh

average electricity your solar panels will generate

98%

of your home's energy provided by solar energy

SAVINGS ON UTILITY BILLS OVER 30 YEARS

\$362,238

total cost of grid electricity without solar panels

\$89,886

total cost of grid electricity & solar energy with solar panels

\$272,398

amount you will save by going solar

GREENHOUSE GAS EMISSIONS REDUCTION

1366

equivalent # of trees planted

34.02

equivalent # of cars taken off the road

160 Metric Tons

GHG emissions you will reduce by going solar

Working with a Solar Guide, you can adjust the equipment configuration, financing plan and installation options until you're satisfied that solar energy is right for you. Then we'll produce a detailed design and dispatch a qualified local contractor to conduct measurements and verify the accuracy of our computer model.

Our platform provides integrated communications to keep everyone in the loop, increasing efficiency and reducing costs associated while dramatically improving the go-solar experience!

Community Solar -- a new model for expanding the solar market

Despite the growing popularity of solar energy, many people are stuck with more expensive, dirty power from the electric company because don't own their own property, have too much shading or don't qualify for financing.

That's why we now offer Community Solar.

Community Solar is a shared solar facility, where multiple homes and businesses can subscribe to the energy generated by a remote solar garden.

With Community Solar, there are three great ways for homes and businesses to benefit from the switch to solar energy:

1. By installing solar panels on-site for their own consumption
2. By subscribing to the energy produced by Community Solar generators
3. By hosting Community Solar generation facilities for remote subscribers

Before Community Solar, solar energy was only for owner-occupied properties that could host solar panels on site. Now, everyone who lives or works in an area with Community Solar can save money by switching to solar. Homes or businesses, such as offices, shops and restaurants, can subscribe to clean solar energy generated off-site and reduce their electricity bills.

The energy for Community Solar is generated in a solar garden hosted on any unused roof or ground space. This is a great new way for schools, churches, malls, car dealerships, municipal properties, factories and farms to produce a new revenue stream at no cost by hosting solar panels for Community Solar.

Like cloud computing and Software-as-a-Service, Community Solar provides recurring revenue and high margins. We will own and operate the solar gardens, and our Solar Clubs and solar promoters will offer subscriptions for the energy produced.

Invest in Geostellar

How our business model changes the energy equation

Customer acquisition represents a significant part of the installed cost of solar energy. By compensating individuals and organizations for their success in promoting solar through Solar Club, we are creating a low-cost, high-value distribution channel. In areas where solar energy costs less than retail electricity from the grid, solar market penetration explodes.

Geostellar, an online solar energy platform, makes it easy for Solar Club promoters to build teams, launch campaigns and gain customers for solar energy. We believe our solar energy platform will change the energy market as dramatically as Airbnb changed the hospitality industry and Uber changed transportation.

Senior Vice President and Equity Research Analyst Pavel Molchanov of investment advisory firm Raymond James believes our solar energy platform could change the energy market as dramatically as Airbnb changed the hospitality industry and Uber changed transportation.

When prospects learn about solar energy from friends, neighbors and community organizations, such as their schools, churches and employers, they are much more likely to go solar. For this reason, our Solar Clubs have a higher conversion rate and lower cost of customer acquisition than the sales and marketing models used by most solar energy companies.

Invest in Geostellar — Republic

10/6/17, 1:45 PM

We are able to pass some of this savings along to customers in the form of lower cost energy, reward individuals and organizations that promote solar and earn a profit for Geostellar. Geostellar makes a profit in two ways, by installing complete solar energy systems on-site for “Behind the Meter” generation and consumption, and by selling subscriptions to energy generated by “Community Solar” facilities.

1. Behind the Meter

Homes and businesses reduce electricity costs by installing solar panels on their property. Geostellar procures the solar equipment and installation labor at low wholesale rates and offers attractive financing terms. The property owner typically switches to solar with no money out of pocket. We provide a fully-installed system at a competitive retail price.

2. Community Solar

Geostellar owns and operates the solar gardens, and collects recurring revenue from subscriptions to the solar energy generated. Our customers subscribe to solar energy produced in remote solar gardens, and the savings are credited by the utility directly on their monthly electric bills.

Together, the complementary solar offerings will allow us to expand the market for solar energy, achieve positive cash-flow and provide exceptional returns to shareholders.

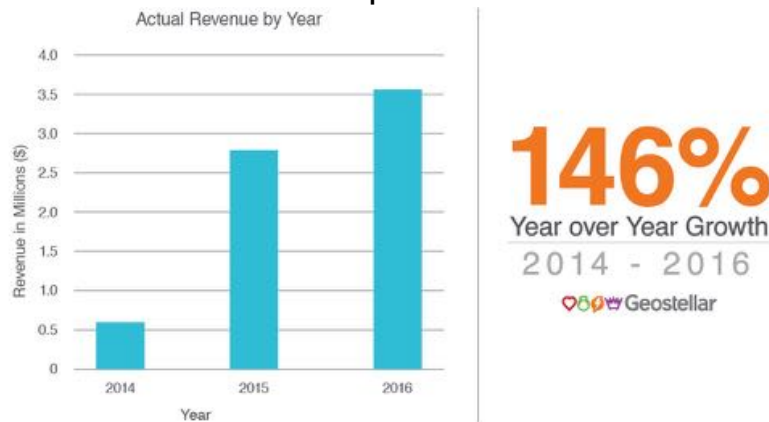

Partners committed to solar with Geostellar

We were competitively selected by these and other significant organizations as the solar energy partner of record.

Based on the examples of these leading organizations, new Solar Clubs are forming every day!

A growing company in an explosive market

We're growing rapidly by continually attracting new partners, promoters and customers. As we grow, we are also improving our margins and plan to become cash-flow positive within the next twelve months.

Solar energy costs continually fall, as higher-capacity solar panels become less expensive to produce and systems become easier to install. Geostellar also drives down the price of solar by reducing customer acquisition costs. At the same time, electric utility rates steadily rise at an average rate of 4.8% a year.

When the price of solar energy is less than that of retail grid electricity, market penetration of solar explodes.

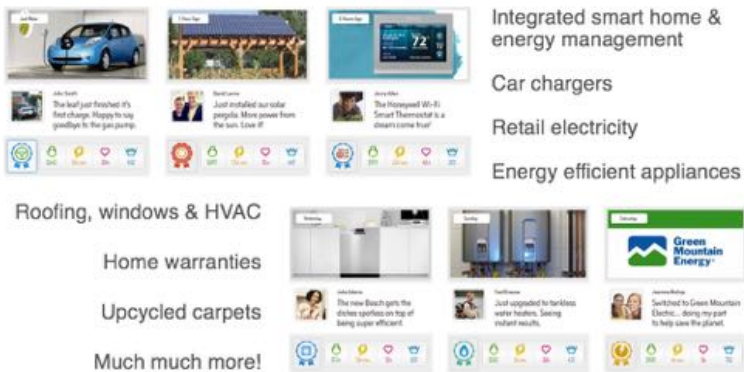

Solar energy is the fastest growing form of new electrical generating capacity in the US and promises to provide over 25% of global electricity generation by 2050.

We intend to provide liquidity for our investors through the sale of the company or by an Initial Public Offering. Possible acquirers include investor-owned utilities that will need to introduce solar offerings to remain relevant and achieve growth and major ecommerce platforms that are adding essential home services offerings. An IPO would most likely be achieved through the Reg A+ rules. Geostellar plans to qualify for a Reg A+ offering later this year, and can then list our stock on an equities exchange at little additional effort or expense.

Our vision beyond solar: "Sustainability-as-a-service"

Our instant, interactive solar energy platform includes a 3D model of each structure on a property, energy use, rates, incentives and other data sets. As the trusted solar provider, Geostellar will monitor the home or business energy production and consumption for 30 years.

With this intimate connection to our customer, we can offer upgrades and cross-sell a wide variety of goods and services, including energy efficient home improvements, warranties, appliances, smart home equipment and controls. We also plan to provide software services and financing for a fully-integrated Internet-of-Things ("IoT") offering on our platform.

We believe sustainability is a core value for the modern home and business, rather than an add-on. Green products and services should cost less than wasteful items that wind up in landfills. Geostellar will grow to be the platform for the ecological lifestyle.

We've developed a cryptocurrency token, Zydeco, planned for release later this year in an Initial Coin Offering ("ICO"). Each token will represent a Watt of potential solar capacity. The purchase price of tokens will be applied to the development of solar projects. When the total solar power capacity represented by a campaign is deployed, value will be transferred back to the token.

A cryptocurrency to expand solar capacity

Zydeco, a solar-powered cryptocurrency, is planned for release later this year in an Initial Coin Offering ("ICO"). Each blockchain token will represent onea Watt of potential solar capacity. The purchase price of tokens will be applied to the development of solar projects. When the total solar power capacity represented by a campaign is commissioned, value created by the solar projects will be shared with token holders. Token holders may optionally receive the created value as a lump sum at the time the Watts of solar power is deployed, or over time as solar energy kilowatt hours are generated.

As the rate of solar power deployment is accelerated and the cost of capacity declines, the value of the tokens in the Zydeco economy is expected to increase. We intend for our token sales, including the ICO, to comply with all relevant laws and regulations governing the issuance and transfer of securities in the United States and abroad.

Competitive Landscape

We're the original solar energy platform, delivering a complete solution tailored to meet the unique needs of each individual customer.

Our competitors include vertically integrated providers that are less competitive on price, due to their high costs structures, lead generators that tend to confuse customers with competing offers and network marketing companies that make most of their revenue from membership fees.

Let's make solar simple, convenient and fun!

As a solar energy platform, we provide unparalleled solar value and exceptional customer experience. The internet only needs one major solar energy platform, supporting suppliers, customers, promoters and partners in an integrated, holistic system, and we are building it. We encourage business model innovation that creates new efficiencies, improves our customer experience and increases the value of solar for everyone.

Join us in making solar our mainstream energy source by promoting clean, affordable solar energy in your community. Love solar? Join the club! Invest in Geostellar!

[Invest in Geostellar](#)

* – We've developed the initial code for a cryptocurrency token, Zydeco, that we may release in the future in an Initial Coin Offering ("ICO"). We anticipate that each Zydeco blockchain token would represent one Watt of solar power capacity. The purchase price of tokens would be applied to the development of solar projects and the related administrative and regulatory costs.

Invest in Geostellar — Republic

10/6/17, 1:45 PM

We intend for our token sales, including the ICO, to comply with all relevant laws and regulations governing the issuance and transfer of securities in the United States and abroad. However, given the uncertainty related to the regulatory environment of ICO's we are unable to guarantee that we will be successful in structuring our ICO in a manner that would comply with applicable law. Whether we move forward with the possibility of using an ICO is unknown and speculative. We are under no obligation to carry out an ICO and may partner with affiliates or third-parties to develop and issue the ICO. You should not invest in us solely as a result of our consideration of the ICO since it may not come to fruition.

FAQ

[Who are specific competitors, and how are you different?](#) >

How does Geostellar make money on solar installations?

How does Geostellar make money on Community Solar?

What are the gross margins on solar installations and Community Solar?

Where do you offer solar energy? What are your expansion plans?

Still have questions? Check the [discussion section](#).

Who are specific competitors, and how are you different?

- **Vertically integrated providers**, such as SolarCity, Vivint Solar and SunRun, have high fixed labor, financing and equipment costs. Because of their high cost structure, they are less competitive on price, reducing the value and benefits of solar energy for their customers.
- **Lead generators** such as Google's Project Sunroof, EnergySage and Pick My Solar sell leads to solar providers or produce competitive bids. This model provides a confusing customer experience, requiring the customer to make decisions without enough knowledge of equipment, installation and financing options. These sites can also lead to aggressive, annoying sales tactics by providers.
- **Network marketers** such as Powur, Clarus Power and Solar Buyers Club recruit independent representatives that generate leads for local installers or vertically-integrated providers. This model provides both a poor customer experience and low solar value. Often, the solar energy solutions offered are over-priced and out of date, and the independent representatives are poorly-trained and ill-informed. Many network marketing companies make the bulk of their revenue from membership fees, with a high churn of representatives.

Risks

We have incurred operating losses and may be unable to achieve or sustain profitability in the future. >

Our ability to utilize net operating loss carry-forwards to offset future taxable income may be limited.

We have not yet generated significant revenues.

Our auditors have expressed concern regarding ability to operate as a going concern.

We do not have the ability to pay all of our debts and may not be able to obtain additional capital.

[Show all Risks](#)

We have incurred operating losses since our inception on February 22, 2010. We have incurred net losses of \$3,581,413 and \$5,778,487 for the two fiscal calendar years 2015 and 2016, as we have invested in our patented online (web, mobile and tablet) big-data geomatic technology platform (the "Platform"), focused on lead generation, developed our sales and fulfillment processes, and worked towards cash flow breakeven point. We expect to continue to incur net losses from operations as we finance our operations, expand our fulfillment, engineering, administrative, sales and marketing staffs, and implement internal systems and infrastructure to support our growth. Failure to grow at a sufficient rate to support these investments in personnel, systems and infrastructure, could adversely affect our business and results of operations. Our ability to achieve profitability depends on a number of factors, including: growing our customer base; finding investors willing to invest in us; maintaining and further lowering our cost of capital; reducing the time between first customer contact and interconnection to the power grid, which improves customer satisfaction and conversion rates, and reduces fallout; reducing the cost of components for our solar energy systems; reducing our operating costs by optimizing our sales, design and installation processes and supply chain logistics; and achieving profitability and our ability to sustain or increase our profitability in the future.

Patented technology, and a business model that makes solar more affordable to consumers. Lower cost drives adoption. If this company benefits from my investment, the environment will also. Could be one of the most impactful investments of my life.

I am the founder of CREW. Having been in solar for 12 years, I have never seen a better platform than the "high tech" of Geostellar with the "high touch" of CREW. Solar it "relational" not "transactional." Together we have the winning combination.
