Co-Founder, Director of Research and Development

Neurohacker Collective

Jan 2016 – Present • 2 yrs 7 mos

San Diego

Daniel is the director of Research and Development and a Co-Founder at the Neurohacker Collective, where he is focused on developing processes and technologies for advancing medicine and human optimization. He is particularly focused on personalized medicine, adequate approaches to complex illness, and deepening our knowledge of how the human regulatory systems function, how they break down, and how they can be supported to function with greater resilience.

Civilization Emerging

Mar 2017 – Present • 1 yr 5 mos

Growing up home-schooled, Daniel had early exposure to design science (Buckminster Fuller, Jacques Fresco, Permaculture, etc.), systems science and complexity (Fritjof Capra, Stuart Kauffman, etc.), philosophy and psychology (eastern and western approaches), and activism (animal rights, environmental issues, social justice, etc.) His passion has always been at the intersection of these topics – specifically, facilitating the emergence into a mature civilization – that can prevent otherwise impending catastrophes, remediate existing damage, make possible a radically higher quality of life for all sustainably, and support greater realization of our individual and collective potential.

Daniel works on a number of projects related to these goals.

Founder, Director of Research and Development

Critical Path Global

2013 – Aug 2016 • 3 yrs

San Diego

Daniel is the Founder of Critical Path Global and the previous think tank that lead to its formation -- Strategic Global Solutions. His background in systems science, human behavior, and activism brought him to focus on the global systems that interconnect and drive our major global challenges. He has spent much of the last decade studying the etiology, scope, magnitude, timelines, and interconnectedness of major issues; inventorying global resources and solutions; doing detailed comparative analysis of economic and governance systems; and developing comprehensive systems solutions, adequate to the issues and realistically achievable.

The current work of Critical Path Global is focused on the Emergence Project:
