ABOUT LIBERTY ACRES FARM

Liberty Acres Farm was born out of the desire to provide healthy, environmentally friendly food for our families.

Everything at Liberty Acres, first and foremost, is raised in a manner that is both humane and embraces the essence of that particular animal. We let pigs be pigs, chickens be chickens, and cows be cows. All food produced on the farm is eaten by our families as part of a wholesome, healthy diet. Our land management practices help build healthy soil and prevent erosion.

The farm currently produces pasture raised broiler chickens, eggs from pasture raised hens, pastured pork, pasture raised turkeys, grass fed lamb, and in the near future grass-fed beef.

All animals are raised on pasture and provided with non-GMO supplemental feed and minerals as needed, with the exception of the lamb and beef that will receive no supplemental feed. The pastures are maintained using management intensive grazing techniques. Management intensive grazing techniques help build naturally fertilized soil, sequester carbon, and reduce water runoff. No artificial fertilizers, herbicides, pesticides, growth hormones, or antibiotics (unless needed to treat illness) are used.

Chickens and turkeys are humanely processed on-site. Sales are farm direct and through local farmers markets.

Our goal is to do our part to shift the current paradigm away from large, corporate owned, environmentally destructive, factory style farms toward small, family owned, environmentally responsible, local food systems. We want our families, friends, and customers to be connected to their food. When we are fully operational, we will welcome visitors to the farm and be completely transparent about our operation.

WHY YOU SHOULD INVEST

People should invest because they believe in the positive shift in our food system. They believe in alternatives to large factory farms. They believe in chemical, and drug free food. They believe in the humane farming techniques, that rebuild the soil and leave the land better than we found it.

REVENUE SHARE CALCULATOR

Want to see some possible return scenarios?

How much is the company raising?

\$0

What do you expect next year's revenue to be?

\$0

At what rate do you expect revenue to grow each year?

0%

GO

*The calculations are mathematical based on user inputs and may not reflect actual results. Use of this calculator does not constitute investment advice. We are providing this tool to help you evaluate potential revenue sharing scenarios and payback periods. Any determination is your sole responsibility.

HOW WE INTEND TO MAKE MONEY

Through direct marketing, as well as, wholesale accounts, our farm will supply the market with premium, beyond organic meat products and eggs. Direct sales will come through on farm sales, CSAs, and farms markets. Wholesale accounts include local stores and restaurants.

WHY WE ARE RAISING CAPITAL, AND WHAT WE'LL DO WITH IT

We are raising capital to take the business to the next level. We are in our second year of business on a trajectory to increase our revenue 50-75% over the first year.

This capital will allow us to build permanent perimeter fencing that will enable us to start our grass fed beef program which will in turn diversify our product line even more.

The capital will also be used for the construction of a USDA approved poultry processing house. Being able to process under USDA inspection allows the sales of our chicken across state lines and opens up a whole new world of revenue streams. Right now we process on farm but can only sell poultry within the state of Pennsylvania. This processing building will also allow us to process other farms' chickens which can provide another source of revenue. We often have requests for us to process other people's birds. Unfortunately, by law, we are not permitted to do so.

FAQ

Are we organic?

really isn't that simple. In order for our products are organic we must be simple. That is no. However, certification requires a mountain of paper work, meticulous record keeping and paying a third party certifier.

Currently, we have neither the time, the resources nor the desire to do this.

Do we butcher our own meat?
