**Subject:** Hi and an opportunity

Hi Preston,

I hope all is well. We're puttering along. We continue to have fun adventures in the Airstream – meeting good folks as we go along. Gives a new meaning to working remotely!

As you know, I've been working with Eisana Health for quite a few years. We are working hard to prevent a very nasty side effect from cancer treatment – permanent nerve damage in hands and feet caused by common chemo drugs. We hope to be on market within a year and this will help hundreds of thousands of cancer patients.

We are raising money right now, and are using equity crowdfunding on the Wefunder platform. Equity crowdfunding is a legal way, controlled by the Securities and Exchange Commission (SEC), to make it easy for everyone to participate in investing. As a first step, to be compliant, we need to secure \$50,000 in pledges. Once we reach \$50,000 in commitments, our campaign can go live and you, and others, will be able to invest in our company. Our minimum is \$100 and Wefunder will keep track of everyone's investment so that if we have a successful exit, each investor will be rewarded. You can find additional information about our company here: <https://wefunder.com/eisana.health>

I'd love for you to join us on our mission to improve the quality of life of cancer survivors.

Feel free to give me a call if you want to chat.

Carole

Required disclosure: We are 'testing the waters' to gauge investor interest in an offering under Regulation Crowdfunding. No money or other consideration is being solicited. If sent, it will not be accepted. No offer to buy securities will be accepted. No part of the purchase price will be received until a Form C is filed and only through Wefunder's platform. Any indication of interest involves no obligation or commitment of any kind.

**Subject:** An important ask from Eisana Health

Dear Investors in Eisana Health,  
I hope all is well and your 2026 is off to a great start.

As you know, the fundraising environment for pre-revenue start-ups is dismal. We have decided to try equity crowdfunding using the Wefunder platform. If you aren't familiar with equity crowdfunding, it is a legal way, controlled by the Securities and Exchange Commission (SEC), to make it easy for everyone, not just accredited investors, to participate in investing with very low minimums (\$100).

As a first step, to be compliant, **we need to secure \$50,000 in pledges**. Once we reach \$50,000 in commitments, our campaign can go live and reach hundreds of people to potentially invest in our company. This will be an equity investment in Eisana Health and Wefunder will keep track of everyone's investment so that if we have a successful exit, each investor will get a pay-out. Wefunder will also consolidate all investors into one SPV so there will only be one line on our cap table.

**I am asking each of you to pledge to invest \$1,000 (or more) to help us hit the \$50k goal, so that we can go live.** This is super important. If we don't hit \$50k, all the pledges are voided and we lose this creative opportunity to raise capital. **I made my \$1,000 pledge yesterday.**

You can find additional information about our raise here: <https://wefunder.com/eisana.health>

We are working very hard to prevent a very nasty side effect from cancer treatment – permanent nerve damage in hands and feet caused by common chemo drugs. For any of you who know the breast cancer space, we just got the most well-known breast cancer oncologist to agree to be an advisor, Dr. Hope Rugo at UCSF and City of Hope. This is very big news and great validation. She is very excited about what we are doing and wants to help. We hope to be on market within a year and we will help hundreds of thousands of cancer patients.

We really need your help, now.

Feel free to give me a call if you want to chat.  
Carole

Hey Greg!

How's retirement? Is it strange? I'm having a hard time wrapping my head around the concept...but in April, I'll be signing up for Medicare. We are so old.

The guys are doing a great job for us, but I do miss you! At their prodding, we did go ahead and buy a big ol' truck and an Airstream. It's been a blast.

As you know, I've been working with Eisana Health ([www.eisana.com](http://www.eisana.com)) for a few years. **Subject:** Update on my start-up Eisana Health

Dear Stacie,

Jonathan is loving his job. Thank you so much for being such a great role model and supporter of his. I heard you moved – that’s exciting. I get updates on Blake from Caroline. It’s amazing how quickly time is flying by – our kids are young adults!

We’ve made a ton of progress on our medical device since you and I talked a few years back. We’ve turned the idea into a real device that clinicians are clamoring for. I just signed on the most well-known breast cancer oncologist from UCSF/City of Hope, Dr. Hope Rugo. She’s super excited about what we are doing and is all in on supporting us. We also have support from MD Anderson, Mayo Clinic (we were invited into their Innovation Exchange), and Kaiser Permanente. And, we’ve received funding from the National Cancer Institute and the American Cancer Society.

As a reminder, we are working very hard to prevent a very nasty side effect from cancer treatment – permanent nerve damage in hands and feet caused by common chemo drugs. Two of the worst offenders are Taxol (breast, ovarian and lung cancers) and oxaliplatin (colorectal and bladder cancers). We hope to be on market within a year and this device will help hundreds of thousands of cancer patients.

We are raising money right now, and are using equity crowdfunding on the Wefunder platform. We are looking for people who have been touched by cancer and want to be part of the solution to help cancer survivors live a better life. Equity crowdfunding is a legal way, controlled by the Securities and Exchange Commission (SEC), to make it easy for everyone to participate in investing. As a first step, to be compliant, **we need to secure \$50,000 in pledges**. Once we reach \$50,000 in commitments, our campaign can go live and will be accessible by hundreds of people. Wefunder will keep track of everyone’s investment so that if we have a successful exit, each investor will be rewarded. You can find additional information on our company and a button to “reserve” a pledge here: <https://wefunder.com/eisana.health>  
The money we raise will help get this device to patients.

I’d love for you to join us on our mission to improve the quality of life of cancer survivors. Or, if you know someone (like a cancer survivor) who might like to help, feel free to forward this email.

Feel free to give me a call if you want to chat, and say hi to Rob!

Hi Julie,  
We have \$50k in on the raise – aiming for \$1M. This is our second raise – in 2022 we raised \$900k also on a Convertible Note.

Our minimum check size is \$25k.

Hi Carole and Marty!  
Super interesting and such a real need for patients.

Carole, So glad you are doing well and hats off for developing this practical product.

Can you tell me where you are on the raise and what the average check size is?

Thanks.

Best regards,  
Julie

Hi Julie,  
Congrats on your successes!

I've been working away at my own start-up, and Marty has kindly been my board chair. We are doing something relatively simple – a 510(k) exempt device. It's a long way from the challenges of Dendreon.

I ended up with breast cancer in 2017 and, after decades of working on cancer innovations, was shocked at how non-innovative my treatment protocol was, even at MD Anderson. The side effect that most concerned me was chemotherapy-induced peripheral neuropathy because there is no cure. I discovered that cooling on the day of chemo can prevent the nerve damage but you have to cool without stopping for several hours until the drug sufficiently clears. There's nothing available to help cancer patients – I used baggies of frozen corn which was better than nothing but far from ideal.

We are solving that problem. We are the only company with a completely mobile cooling device that patients can wear, without stopping for 6-8 hours. The cooling gloves are sleek with conductive fingertips and the cooling booties are like shoes. We had an NCI SBIR Contract, and are a 2025 BrightEdge Entrepreneur (BrightEdge is the venture arm of the American Cancer Society). We have lots of validation that we are doing something very important but funding for pre-revenue device companies is worse than dreadful right now. We are at MVP stage, raising \$1m to get to market.

Marty thought you might be interested in investing or might know someone who would be interested in what we are doing. I'll attach a current deck. If this looks interesting, I'd love to hop on a zoom call and catch up!  
Carole

**Subject:** Update on Eisana Health - Wefunder campaign

Hi Mike,  
I hope all is well with you and your wife.

In the meantime, we've launched an equity crowdfunding campaign on Wefunder. I'm sure you've bumped into this before. We chose Wefunder because they consolidate all the investors into one SPV so there's only one line on the cap table. And, Wefunder will keep track of everyone's investment so that if we have a successful exit, each investor will be rewarded.

As a first step, to be compliant, **we need to secure \$50,000 in pledges**. Once we reach \$50,000 in commitments, our campaign can go live and will be accessible by hundreds of people. You can find additional information on our company and a button to "reserve" a pledge here: <https://wefunder.com/eisana.health> The money we raise will help get this device to patients.

I know you indicated that you'd like to invest in the past and this is a nice way since there is no minimum. I'd love for you to join us on our mission to improve the quality of life of cancer survivors. Or, if you know someone (like a cancer survivor) who might like to help, feel free to forward this email.

Feel free to give me a call if you want to chat.  
Carole

Required disclosure: We are 'testing the waters' to gauge investor interest in an offering under Regulation Crowdfunding. No money or other consideration is being solicited. If sent, it will not be accepted. No offer to buy securities will be accepted. No part of the purchase price will be received until a Form C is filed and only through Wefunder's platform. Any indication of interest involves no obligation or commitment of any kind.

Hi Julie,  
We have \$50k in on the raise – aiming for \$1M. This is our second raise – in 2022 we raised \$900k also on a Convertible Note.

Our minimum check size is \$25k.  
Carole

Hi Carole and Marty!  
Super interesting and such a real need for patients.

Carole, So glad you are doing well and hats off for developing this practical product.

Can you tell me where you are on the raise and what the average check size is?

Thanks.

Best regards,  
Julie

Hi Julie,  
Happy New Year! I hope your holidays were nice.

I actually went from Seattle to Hawaii to Texas. Talk about culture shock. My husband (Coast Guard) was stationed in Hawaii for 3 years and we LOVED it. When that came to an end, he retired and took a job at Exxon...hence the move to Texas. The kids will never forgive us for leaving Hawaii...

I am circling back to see if you have any interest in investing. We made a 2 minutes intro video which will bring you up to speed quickly: <https://www.youtube.com/watch?v=J-PYNYHVyys>

Do you want to set up some time to chat? I'd love to hear what you are up to.  
Carole

Hi Carole,  
Wonderful to hear about your start up and the focus. I will take a look at the deck and be back in touch. Did you move to Texas (probably a long time ago!!)

Hi Julie,  
Congrats on your successes!

I've been working away at my own start-up, and Marty has kindly been my board chair. We are doing something relatively simple – a 510(k) exempt device. It's a long way from the challenges of Dendreon.

I ended up with breast cancer in 2017 and, after decades of working on cancer innovations, was shocked at how non-innovative my treatment protocol was, even at MD Anderson. The side effect that most concerned me was chemotherapy-induced peripheral neuropathy because there is no cure. I discovered that cooling on the day of chemo can prevent the nerve damage but you have to cool without stopping for several hours until the drug sufficiently clears. There's nothing available to help cancer patients – I used baggies of frozen corn which was better than nothing but far from ideal.

We are solving that problem. We are the only company with a completely mobile cooling device that patients can wear, without stopping for 6-8 hours. The cooling gloves are sleek with conductive fingertips and the cooling booties are like shoes. We had an NCI SBIR Contract, and are a 2025 BrightEdge Entrepreneur (BrightEdge is the venture arm of the American Cancer Society). We have lots of validation that we are doing something very important but funding for pre-revenue device companies is worse than dreadful right now. We are at MVP stage, raising \$1m to get to market.

Marty thought you might be interested in investing or might know someone who would be interested in what we are doing. I'll attach a current deck. If this looks interesting, I'd love to hop on a zoom call and catch up!  
Carole

---

Hi Mike,

We are only \$13,250 away from hitting our target of \$50,000!! Any chance you and your wife want to help us get our device to cancer patients, to prevent permanent nerve damage in hands and feet? Once we hit \$50,000 in pledges, we can open up our campaign to all the investors on the Wefunder platform. Here's more information and a link to 'reserve' an investment: [www.wefunder.com/eisana.health](http://www.wefunder.com/eisana.health).

Thanks,  
Carole

**Subject:** Update from Eisana Health

---

Dear Laurence,

How's married life? The first year can be pretty tough adjusting to another person. Hopefully it's all going well! I miss our lunches. Any chance you can squeeze me in sometime?

I know you had mentioned an interest in investing in Eisana but were concerned you weren't accredited. Well, now with our community round, that isn't a requirement.

We've made a ton of progress on our medical device. We've turned the idea into a real device that clinicians are clamoring for. I just signed on the most well-known breast cancer oncologist from UCSF/City of Hope, Dr. Hope Rugo. She's super excited about what we are doing and is all in on supporting us.

As a reminder, we are working very hard to prevent a very nasty side effect from cancer treatment – permanent nerve damage in hands and feet caused by common chemo drugs. Two of the worst offenders are Taxol (breast, ovarian and lung cancers) and oxaliplatin (colorectal and bladder cancers). We hope to be on market within a year and this device will help hundreds of thousands of cancer patients.

I'm guessing you know all about equity crowdfunding. As a first step, to be compliant, **we need to secure \$50,000 in pledges**. Once we reach \$50,000 in commitments, our campaign can go live and will be accessible by hundreds of people. Wefunder will keep track of everyone's investment so that if we have a successful exit, each investor will be rewarded. You can find additional information on our company and a button to "reserve" a pledge here: <https://wefunder.com/eisana.health> The money we raise will help get this device to patients.

We are at \$36,750 and just need \$13,250 more. I'd love for you to join us on our mission to improve the quality of life of cancer survivors. Or, if you know someone (like a cancer survivor) who might like to help, feel free to forward this email.

Do let me now if you have time for a lunch!

Carole

**Subject:** FW: Update from Eisana Health

Dear Suresh,

We're making good progress on our first goal of \$50k in our Wefunder crowdfunding campaign. We have \$37,750 already committed! Again, once we hit \$50k in pledges, we can go live which will put us in front of hundreds of investors. We need capital to move forward so it is imperative that we hit \$50k in pledges with our family and friends.

As a reminder, we are working very hard to prevent a very nasty side effect from cancer treatment – permanent nerve damage in hands and feet caused by common chemo drugs. Two of the worst offenders are Taxol (breast, ovarian and lung cancers) and oxaliplatin (colorectal and bladder cancers). We hope to be on market within a year and this device will help hundreds of thousands of cancer patients.

If you could possibly help us out, even with \$1000, that would be so helpful. The link to “reserve” an investment is: <https://wefunder.com/eisana.health> The money we raise will help get this device to patients.

In addition, if you know someone (like a cancer survivor) who might like to help, feel free to forward this email.

Thanks!
