3D-printed sustainable homes | Entrepreneur | Inventor | TEDx
Speaker | Best-selling Author
Los Angeles, California, United States

Summary

Cofounding Azure Printed Homes, my focus is on revolutionizing the construction industry through sustainable practices and innovative 3D printing technology. Our team's commitment to using recycled materials has enabled us to construct homes 70% faster and 30% less expensively while maintaining a positive environmental impact. The competencies in strategic leadership, facilitate the continuous growth and operational excellence of our company.

My journey to founding Azure stemmed from witnessing firsthand the inefficiencies and environmental impact of traditional construction methods. I saw a clear need for a more sustainable and efficient approach, one that could address the growing housing crisis while minimizing our footprint on the planet. This realization, coupled with the exciting potential of 3D printing technology, sparked the vision for Azure Printed Homes.

Experience
