Ben Cloud

Chief Executive Officer at Biodel AG Inc
Greater Phoenix Area

Summary

Biodel AG develops biological ingredients for commercial crop production with a growing emphasis in regenerative agriculture for sustainable crop production and carbon sequestration.

Biodel AG developed and manufactures Sequester, a registered brand. Sequester is a Cyanobacteria based soil amendment sold to residential/landscape; small farm; and commercial AG producers.

Sequester is used by Growers/Customers as a Microbial Cover Crop due to rapid soil aggregation, increased water holding capacity, and lower fertility requirements.

Sequester is also used by Farmland Owners for Microbial Soil Reclamation and transitioning the farming enterprise to organic/regenerative practices and to optimize carbon sequestration for the sale of carbon credits.

For more information, go to sequester.ag
