April 21 at 5:45 AM ·

Hello Dear Friends! It's been in the works for a bit but nevertheless, here it is. We are coming to the US with this state of the art green building technology. I'm sharing this link with you before it becomes public.

Disclaimer

We are 'testing the waters' to gauge investor interest in an offering under Regulation Crowdfunding. No money or other consideration is being solicited. If sent, it will not be accepted. No offer to buy securities will be accepted. No part of the purchase price will be received until a Form C is filed and only through Wefunder's platform. Any indication of interest involves no obligation or commitment of any kind.

#Wildfires in #California are getting worse each year. The prices of #lumber will sky rocket again, making new houses less accessible than they already are!

The solution to this problem - @System3e

SYSTEM 3E @System3e · Jul 8

According to report published by @McKinsey, the #construction industry is ripe for disruption. It needs #new and #innovative materials. SYSTEM 3E with its low carbon footprint and its cost efficiency is a perfect solution.

Find out more about @System3e: bit.ly/3bCcBrT

materials represent a \$1 trillion global industry; materials usually account for much of the total cost of projects. Traditional materials such as concrete, cement, and asphalt are the backbone of this demand. But new and better construction materials are also required due to several trends:

Green construction. There is an immense push to adopt materials and technologies with lower carbon footprints.

Cost efficiency. Given substantial cost pressures, there is a need for structural change in the choice of materials, in addition to incremental lean efforts.

A unique trait of SYSTEM 3E is the mortar free connection of elements, the walls of the house are built like Lego blocks, using a "click-click" method. Join our investor group and together we will bring this innovation to US.

**Building technologies of the future,
an opportunity for the U.S. construction
market.**

Digitization of processes and services, autonomous cars, smartphones with enormous computing power or smart medication. Everything that a dozen or so years ago seemed to be science fiction is now at your fingertips. In the last 30 years, almost every market segment has made a huge technological leap forward. The construction segment has not. This European company presents an innovation that may change the construction market forever.

The Hoover Dam, Lake Pontchartrain Causeway or Burj Khalifa were created due to the invention of concrete. This construction material was the last great invention of the 1920s, when the Swede Axel Ericsson developed the technology for obtaining cellular concrete. Thanks to him, civil engineering projects developed on an unprecedented scale and overshadowed everything else that humanity had previously built. At the same time, the technology for building single-family houses did not make such a spectacular leap.

SYSTEM 3E is a European technology for construction of buildings, enabling quick construction of durable and ecological houses. The material of SYSTEM 3E elements is **perlite**, a natural volcanic rock, commonly found in the USA and around the world. The United States owns nearly 75% of the world's perlite deposits. It is mined in Arizona, California, Idaho, Nevada, New Mexico and Oregon.

"Demand for houses in the U.S. is huge, and in 2021 alone house prices rose by 17%. These results are not only our motivation, but a real business opportunity to become active on the American market" - emphasis.

Dr. Artur Chmielewski
CEO SYSTEM 3E

**This innovative European construction company
plans to build a factory in the USA and shake up the market
of traditional materials.**

The company's technological solutions are **protected by patent law on key global markets, including the US**. The innovative debut has already happened: houses built in SYSTEM 3E technology are built in Sweden, Spain, the Netherlands and Great Britain. There are already over 100 houses made of SYSTEM 3E perlite elements in the world and more are under construction. The company regularly presents its innovative product at the largest industry events. Events in Las Vegas, London and Brussels are just a few of the market fairs where SYSTEM 3E showcased their new solution for the construction market.

In order to meet the challenges of the huge potential of the American market, the company decided to offer interested investors the opportunity to invest. The company plans to construct a 3E element factory in the United States as early as 2022. Ultimately, the factory will produce approx. 2 million elements per year, which will allow the construction of up to 1,000 houses per year. You can join the group of the company's investors via the WeFunder website.
