# Tim Wolters

Father, Founder, Fan of the Future  
Denver Metropolitan Area

## Summary

An inventor and serial entrepreneur from Boulder Colorado, Tim has founded four software and SaaS companies including Dante Software and Collective Intellect, and RoundPegg taking them from conception to revenue generation to sale. He is keenly interested in finding and supporting solutions for climate change and has started a non-profit to funnel that energy through called 1000Gretas.org

Tim is a well-known industry thought leader in machine learning to extract knowledge from unstructured data sources. His work pioneered the use of advanced analytical non-linear correlation models in building business applications. Tim holds patents in the areas of Business Intelligence (BI), Business Activity Monitoring (BAM), and social media influencer analysis.

In addition to startups, Tim has built an eclectic taste for music, poetry, and downhill sports. He has managed a stock market portfolio (5 points of alpha if you care about such things), has been a programmer of the collective (see Toby Segaran's book on Programming Collective Intelligence), Foo Camper, blogger, Tech Stars alumni and mentor, and epicurean wannabe.

Specialties: Start-up Company Formation / Execution; Science/Technology/Product, IP, Business Strategy, Capital Formation; Lean Startup Strategies

## Experience

CrowdSolve

CEO and CoFounder

December 2021 - Present (1 year 1 month)

Denver, Colorado, United States

CrowdSolve can onboard thousands of companies into a software platform to help match them to various resources to move their ideas and companies forwards towards incubation. CrowdSolve helps identify where the company is at on their path to getting successfully off the ground and points them to resources that can help them out. This process ends up creating all of the assets a company needs to apply for the various incubators out there so that it becomes very easy (instead of the onerous last minute process it is today) for them to apply to an incubator. CrowdSolve analyzes acceptance data to figure out what gives each the best shot of getting in to each different incubator. Along the way it is also connecting them with mentors, experts, and access to grants.

### On Deck

OnDeck Climate Tech Fellow

June 2021 - Present (1 year 7 months)

### 1000Gretas

Founding Member

April 2020 - Present (2 years 9 months)

Colorado, United States

Created a non-profit with a set of tech entrepreneurs to find the next generation of problem solvers and crowdsource solutions to global warming.

### Gloo

Product Owner

October 2016 - February 2022 (5 years 5 months)

Boulder

Gloo is providing a digital framework for personal growth. Matching up mentors/coaches to individuals and providing all of the power of content creation, recommendation, growth assessment and progress, Gloo is the one stop shop to help you figure out how to get from here to there in life and pairing you with the people that create the shortcuts to make it happen.

### RoundPegg

CEO and Founder

May 2009 - March 2017 (7 years 11 months)

Boulder, Colorado

Update! RoundPegg sold in March of 2017 to Achievers, a rewards and recognition company out of Toronto! On to other things!

Scientifically ensuring that your employees perform better, stay longer and are more engaged by quantifying company culture.

We help companies understand their culture from the ground up to help managers lead better and identify hires who fit.

Making the world happier one community, one company, one employee at a time.

#### Techstars

Class of 2010 CEO

May 2010 - August 2010 (4 months)

Boulder

CEO of RoundPegg In the Techstars program in 2010 Boulder class along with Sphero, Kapost, and others.

#### Collective Intellect
