Dear Alex,

As a trusted part of our inner circle, you probably already know that Ahtyba and I are working hard to launch our company, Vero Building Systems. This company was born out of our desire to give back to our community, and to provide a better way to build safe, environmentally friendly structures at a reasonable price point. When Hurricane Michael hit the panhandle as a massive category 5 storm, it became increasingly clear that our community was not and is not capable of surviving a storm of this magnitude. As we researched a better way to build, we began to realize how much every community truly needs a solution like ours to safeguard against the disasters we see everyday such as hurricanes, tornadoes, fires, earthquakes, and even gun violence. We believe that safe homes, schools, hospitals, and infrastructure should be a basic human right- never reserved only for those who can afford to pay the extra cost to add safety features to a structure.

Vero Building Systems is partnering with Emmedue Italy, a world renowned leader in the building materials space with over 41 years of experience, and the original inventor of the M2 panel, consisting of Polystyrene and galvanized steel wire mesh. With 76 successful plants, and millions of finished projects around the globe, Emmedue is a powerhouse, and we are so grateful to have them on board as we bring the Vero Building System to the US market.

**We want to invite you to invest in the future of construction.**

Right now, our crowdfunding campaign with aggressive early bird terms is only open to friends and family - through the link provided below. These terms will cap out at 500k and then will no longer be available. Please contact our team with any questions you may have, and we hope that you will consider joining us, to bring a better way to build to the US market, and leave all of our communities better than we found them.

[CLICK HERE to invest in our Wefunder Campaign!](#)

**To:** Alex Jakobs <alex.jakobs88@gmail.com>

Hey Alex,

This is really helpful feedback thank you! Here are a few of the answers to the questions below:

1. We already have code compliance and a US Product code available, so this will not be an issue and we have already been in talks with developers in the Chicago area about multifamily residences especially because of the bulletproof aspect of our system.
2. The concept is very simple, it was invented in Italy over 4 decades ago to sustain large earthquakes that they see on the mid-east coast where the inventor still lives, Fano Italy. Training will not be an issue because we have built free training and certification into our business model, and as mentioned before, the system is very simple to utilize, any basic framing crew could easily install our panels, and usually about 40% quicker than any other building system- mostly because instead of using 2x4's to Frame, you are using 6" wide panels- so naturally the process goes MUCH quicker.
3. He is totally right! A custom home would almost always utilize a hybrid system, where our panels would be used for all exterior, or load bearing walls, stairs, landing and roof- still ensuring the extreme weather safety, energy efficiency, and massive price benefits of our panels while interior/demising walls could use traditional lumber/materials. Our panels can be used alongside lumber, steel frame, or really any other traditional building method.
4. The revenue growth is hard to believe at first glance and we thought so too. The reason for this is because of the amazing margins in manufacturing our panels- we only use 2 raw materials, steel wire and polystyrene bead. We can produce 17000+ sq ft of panels per shift- Our numbers really skyrocket as we project sales growing later in our first year, when we will start running 2 shifts as soon as can be supported by sales. Another amazing benefit of our equipment is that we can add another panel line, while only adding 5 extra employees to our workforce, and DOUBLE our manufacturing capacity, with very little increase to our bottom line.
5. We are currently negotiating exclusivity with our Italian partners and hope to have that buttoned up by the end of Q1 2023. There is one other factory in the US currently producing this system, and they have had some success, but their main business is selling motor, stucco, different PSI concrete mixes, and they also offer ICF (Insulated Concrete Form- probably the most widely used competitive system- with very obvious deficiencies compared to VERO)
6. The main reason we believe this is going to take off at such an enormous rate in the US is because it really and truly is a solution to 90% of the problems plaguing the construction market today. Supply chain, insane inflation on materials, increased natural disasters, increasing violent attacks in public spaces such as schools, hospitals, public buildings etc. Our main target markets right now are multi-family and industrial. Industrial sheds/warehousing is a BOOMING market- we know because we have been in the market to lease a space to get up and running and it has been hard to find availability! He is correct also that these are all done with tilt wall- which we can absolutely blow out of the water in several areas- our prices are 1/3 of the cost, you don't need cranes, you can carry a lesser insurance because of the heavy machinery that is no longer needed, and shipping- our panels weigh 15-50lbs depending on the custom size, vs. a multiple ton giant tilt wall modular piece that we have all seen driving down the highways on 18 wheelers.

These are all really well thought out questions, and make a lot of sense. We spent over a year and a half going over and over with our advisors, friends in the construction industry, etc trying to poke these same holes in the system and the business plan. As you know, Ahtyba had such a long an incredible career and did a phenomenal job investing and listening to his advisors- we were set for life and did not need to start this company- but it has become such a passion project for us- and we really hope to change the way the building industry does this, to create opportunity for more diversified workforce, to give builders the actual opportunity to build affordable and SAFE housing, in all communities across the country, wether it be from hurricanes, tornadoes, extreme winter storms, stray bullets, etc.

Hopefully this answers those questions, let me know if theres anything else we can do for you guys!

Annette Rubin

Nik,

I'll start with building materials aren't really my thing. Something like this is likely not allowed by code in many places (like Chicago). The concept is simple and seems like it is used outside the US, but like they mention training local contractors will be an issue.

As a homeowner, I'm not sure I would want my house built with this stuff. Think about if you wanted to renovate anything or had to replace a pipe, you have to chip out a bunch of concrete?

They say they have personally invested \$4mil? Comment doesn't mean anything, but seems like a lot with a \$13mil valuation target.

The revenue growth seems a bit extreme, how do they come up with that? From \$0 to \$7mil to \$24mil the next year? I mean if they can hit that, seems great.

Again, I don't know building materials, but 64-70% gross margin seems really high. I'm guessing, especially at first, they will have to discount the price to get market uptake. Maybe offer extended warranties or free training (I've seen that with other "New" construction processes from overseas.) Again, if they can hit that margin, then it's a great deal.

Seems like they have the factory built, so it's just a matter of if they can get people to buy the stuff. It also depends if they have a US exclusive on the technology? How much does that license cost? Is there any other domestic competition? In the short term I only see this being used in residential or warehouse (which is already prefab concrete panels).

I see a market, but probably not the growth they project.

Sorry for the stream of consciousness review. Let me know your thoughts and if you're going to invest.

David

---

Domenik,

As a trusted part of our inner circle, you probably already know that Annette and I are working hard to launch our company, Vero Building Systems. This company was born out of our desire to give back to our community, and to provide a better way to build safe, environmentally friendly structures at a reasonable price point. When Hurricane Michael hit the panhandle as a massive category 5 storm, it became increasingly clear that our community was not and is not capable of surviving a storm of this magnitude. As we researched a better way to build, we began to realize how much every community truly needs a solution like ours to safeguard against the disasters we see everyday such as hurricanes, tornadoes, fires, earthquakes, and even gun violence. We believe that safe homes, schools, hospitals, and infrastructure should be a basic human right- never reserved only for those who can afford to pay the extra cost to add safety features to a structure.

Vero Building Systems is partnering with Emmedue Italy, a world renowned leader in the building materials space with over 41 years of experience, and the original inventor of the M2 panel, consisting of Polystyrene and galvanized steel wire mesh. With 76 successful plants, and millions of finished projects around the globe, Emmedue is a powerhouse, and we are so grateful to have them on board as we bring the Vero Building System to the US market.

**We want to invite you to invest in the future of construction.**

Right now, our crowdfunding campaign with aggressive early bird terms is only open to friends and family - through the link provided below. These terms will cap out at 500k and then will no longer be available. Please contact our team with any questions you may have, and we hope that you will consider joining us, to bring a better way to build to the US market, and leave all of our communities better than we found them.

We are 'testing the waters' to gauge investor interest in an offering under Regulation Crowdfunding. No money or other consideration is being solicited. If sent, it will not be accepted. No offer to buy securities will be accepted. No part of the purchase price will be received until a Form C is filed and only through Wefunder's platform. Any indication of interest involves no obligation or commitment of any kind.

VERO updates

To: Rick Stone, David Saviola

Sent - amrubin@verobuilt.com January 4, 2023 at 12:28 PM

Rick, I hope you and your family had a wonderful holiday season!

I wanted to circle back with you and send you our updated deck, and give you a few updates on where we are at. The most exciting update I wanted to share with you is that we have signed the lease for our first manufacturing plant location! We will be launching in Kissimmee, FL and will be shipping products by March/April. We currently have 5m+ in verbally accepted proposals that will be moving to contract in the next few weeks.

Attached is our updated deck for your review. We are going to launch a public WeFunder campaign in 2-3 weeks, but have opened early bird terms to only family and friends. The link is below, please let me know if you have any questions/comments or would like to discuss the possibility of partnering with us on an investment level, or as a client for your development projects. I have CC'd one of our founding board members and money pastor.

[https://wefunder.com/Vero\\_building\\_systems](https://wefunder.com/Vero_building_systems)

 **VERO Investor Deck- R1:23.pdf**

Looking forward to hearing from you!

We believe that safe homes, schools, hospitals, and infrastructure should be a basic human right- never reserved only for those who can afford to pay the extra cost to add safety features to a structure.

Vero Building Systems is partnering with Emmedue Italy, a world renowned leader in the building materials space with over 41 years of experience, and the original inventor of the M2 panel, consisting of Polystyrene and galvanized steel wire mesh. With 76 successful plants, and millions of finished projects around the globe, Emmedue is a powerhouse, and we are so grateful to have them on board as we bring the Vero Building System to the US market.

**We want to invite you to invest in the future of construction.**

Right now, our crowdfunding campaign with aggressive early bird terms is only open to friends and family - through the link provided below. These terms will cap out at 500k and then will no longer be available. Please contact our team with any questions you may have, and we hope that you will consider joining us, to bring a better way to build to the US market, and leave all of our communities better than we found them.

We are 'testing the waters' to gauge investor interest in an offering under Regulation Crowdfunding. No money or other consideration is being solicited. If sent, it will not be accepted. No offer to buy securities will be accepted. No part of the purchase price will be received until a Form C is filed and only through Wefunder's platform. Any indication of interest involves no obligation or commitment of any kind.

Dear Ladarius,

As a trusted part of our inner circle, you probably already know that Ahtyba and I are working hard to launch our company, Vero Building Systems. This company was born out of our desire to give back to our community, and to provide a better way to build safe, environmentally friendly structures at a reasonable price point. When Hurricane Michael hit the panhandle as a massive category 5 storm, it became increasingly clear that our community was not and is not capable of surviving a storm of this magnitude. As we researched a better way to build, we began to realize how much every community truly needs a solution like ours to safeguard against the disasters we see everyday such as hurricanes, tornadoes, fires, earthquakes, and even gun violence. We believe that safe homes, schools, hospitals, and infrastructure should be a basic human right- never reserved only for those who can afford to pay the extra cost to add safety features to a structure.

Vero Building Systems is partnering with Emmedue Italy, a world renowned leader in the building materials space with over 41 years of experience, and the original inventor of the M2 panel, consisting of Polystyrene and galvanized steel wire mesh. With 76 successful plants, and millions of finished projects around the globe, Emmedue is a powerhouse, and we are so grateful to have them on board as we bring the Vero Building System to the US market.

We believe that safe homes, schools, hospitals, and infrastructure should be a basic human right- never reserved only for those who can afford to pay the extra cost to add safety features to a structure.

Vero Building Systems is partnering with Emmedue Italy, a world renowned leader in the building materials space with over 41 years of experience, and the original inventor of the M2 panel, consisting of Polystyrene and galvanized steel wire mesh. With 76 successful plants, and millions of finished projects around the globe, Emmedue is a powerhouse, and we are so grateful to have them on board as we bring the Vero Building System to the US market.

**We want to invite you to invest in the future of construction.**

Right now, our crowdfunding campaign with aggressive early bird terms is only open to friends and family - through the link provided below. These terms will cap out at 500k and then will no longer be available. Please contact our team with any questions you may have, and we hope that you will consider joining us, to bring a better way to build to the US market, and leave all of our communities better than we found them.

We are 'testing the waters' to gauge investor interest in an offering under Regulation Crowdfunding. No money or other consideration is being solicited. If sent, it will not be accepted. No offer to buy securities will be accepted. No part of the purchase price will be received until a Form C is filed and only through Wefunder's platform. Any indication of interest involves no obligation or commitment of any kind.

Dear Jabaal,

As a trusted part of our inner circle, you probably already know that Annette and I are working hard to launch our company, Vero Building Systems. This company was born out of our desire to give back to our community, and to provide a better way to build safe, environmentally friendly structures at a reasonable price point. When Hurricane Michael hit the panhandle as a massive category 5 storm, it became increasingly clear that our community was not and is not capable of surviving a storm of this magnitude. As we researched a better way to build, we began to realize how much every community truly needs a solution like ours to safeguard against the disasters we see everyday such as hurricanes, tornadoes, fires, earthquakes, and even gun violence. We believe that safe homes, schools, hospitals, and infrastructure should be a basic human right- never reserved only for those who can afford to pay the extra cost to add safety features to a structure.

Hey Doug! Ahtyba mentioned that you may be interested in learning more about what were doing with Vero, and the investment opportunity we have just launched!

We are bringing an Italian building system to the US market that was invented 41 years ago by Angelo Cadoracci. He was specifically trying to invent a way to build homes that would survive earthquakes, and in doing so he created a building system that is more affordable than any other system on the market, especially Lumber, which is what we use predominantly in the US. It is Miami Dade certified, Cat 5 rated, self-extinguishing, bullet proof, blast resistant, virtually earthquake proof, AND reduced harmful emissions 40% over the building process and 65% over the lifetime of the structure. We are really excited to bring this to the US in a big way. Our first plant will be in Orlando, hoping to ship out our first orders by March 1! Until now Ahtyba and I have funded this completely on our own, we are opening up an investment opportunity on Wefunder now to help us with the rest of our launch expenses until we are fully operational. Right now this is only open to friends and family, and the terms are "early bird" and really aggressive for the first 500k of investment. Our total goal will be 5 million on Wefunder.

Feel free to reach out if you have any questions,  
Love you guys!

I see you've also got Courtney Lindberg on the team. I helped him several times with plumbing issues. We were actually up there at the house with his wife when their son was very critical little Douglas. I would like to have more detail on the financial investing situation. Is that something you can just send my phone or my email? My son is my financial advisor and he would like to look at it! God bless

Good morning Barry. Yes, that little one is a miracle child indeed.

I am not sure what financial investing situation you're talking referring to?

Talking about investing in Vero building. Is there some kind of information about that that's more detailed?

Oh yes for sure! It is not public yet, but with the link below you can make non-binding pledged amounts

Invest in Vero Building Systems: Vero is safer, faster and greener with far less global supply chain issues.

wefunder.com

These are basically reservations, so when they go public with the private equity investment offer, folks that made reservations will be allowed to invest even if it fills up quickly.

Mon, Dec 5 at 11:43 AM

Forgot to mention Vero crowd equity this morning. Be a good idea to start to get in. At this point it is just an estimated commitment, no money likely moving until January anyway.

The image shows a promotional graphic for Vero Building Systems. At the top, there is a large, stylized 'V' logo in blue and orange. Below the logo, the word 'VERO' is written in large, bold, blue letters, with 'BUILDING SYSTEMS' in smaller, orange letters underneath. A white banner across the middle of the graphic contains the text 'INVESTING IN A SAFE & SUSTAINABLE FUTURE'. Below the banner, there is a dark grey box with white text that reads: 'Invest in Vero Building Systems: Vero is safer, faster and greener with far less global supply chain issues.' At the bottom of this box, the website 'wefunder.com' is listed. The background of the graphic features a perspective view of a modern building's interior with a grid of light-colored tiles on the floor and dark structural elements.

In your opinion, how much do I need to put in on that?

Minimum would be \$5k ... but you could definitely go up from there

## Can you vouch for John Doe?

John has applied to raise funding for Company Name on Wefunder and provided your name as a personal reference.

| *Quote goes here*

Wefunder has raised hundreds of millions for startups that later went on to raise over \$5 billion in follow-on funding from venture capitalists.
