Ad 1:

Every year, approximately 200,000 early-stage breast cancer patients in the U.S. experience a delay between diagnosis and surgery due to various factors in our health care system today.

For every 30-day interval of delay to surgery, there is an increased risk for tumor growth and spread.

EMBioSys is developing Efinia™ — a non-invasive wearable platform designed to address this critical treatment window, with the potential to treat the cancer and prevent it from spreading while a patient awaits surgery, from the comfort of home or while on the go.

EMBioSys is "testing the waters" to gauge investor interest in an offering under Regulation Crowdfunding. No money or other consideration is being solicited. If sent, it will not be accepted. No offer to buy securities will be accepted. No part of the purchase price will be received until a Form C is filed and only through Wefunder's platform. Any indication of interest involves no obligation or commitment of any kind.

Ad 2:

What if the future of cancer therapy could be wearable?

EMBioSys is developing Efinia™, a wearable platform with the potential to dramatically improve clinical outcomes as a new cancer treatment modality.

We are starting by addressing unmet needs in breast cancer, with plans to expand the Efinia™ platform into the treatment of other solid tumors.

One platform. A novel new approach. The potential to treat multiple cancers.

The future of breast cancer therapy is wearable!

EMBioSys is developing Efinia™, a non-invasive wearable platform designed to deliver a new approach to cancer therapy from the comfort of home — or on the go.

Starting with unmet needs in breast cancer, EMBioSys is working to advance a therapy designed to improve both treatment results and patient's quality of life.
